Information for Cyrix Chipset Users
The XFree86 Project Inc.
7 March 2000

1. Supported hardware
This driver supports a single chipset ‘mediagx’ that should work on the following Cyrix CPUs
with integrated graphics:

• MediaGX
• MediaGXi
• MediaGXm

2. Features
• Rather sparse (color depth hardcoded to 8)

3. xorg.conf Option

Option "sw_cursor"
   disable the hardware cursor. (Code not verified yet!)

Option "no_accel"
   completely disables acceleration. Usually not recommended.

4. Bugs and Limitations
• As a first cut at the new design, known problems are everywhere. The console font is cor-
rupted upon exit. The server seems stable if the virtual desktop and resolution size match.
I found 1024x768 usable and that’s why I released this version. Geeks can have fun with
this but NEWBIES should use the 3.3.3.1 release instead!

• On some older chipsets, the driver may trigger an illegal instruction just after probing for
the “scratchpad size”. If this is the case, email to <hecker@cat.dfrc.nasa.gov> with the out-
put of

   Xorg -probeonly --verbose

   and this will be fixed.
